

FASCIA BOARD INSTALLATION

The fascia board can be attached to various rim joist sizes.

The width of the fascia board is designed for a 2 x 12 wood joist size. For smaller sizes (e.g. 2 x 10, 2 x 8 and 2 x 6), the board must be trimmed to be flush with the wood joist.

**DO NOT USE
AS STAIR
TREAD**

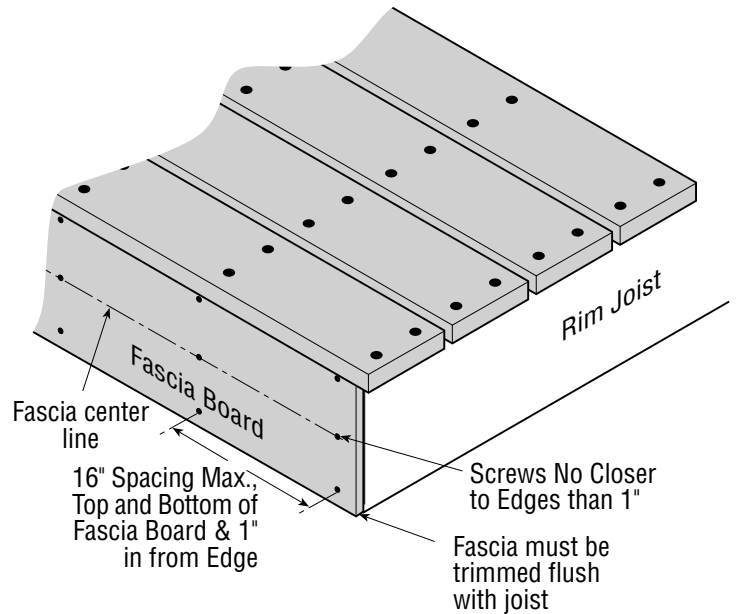

**DO NOT USE
AS DECK
BOARD**

Recommendations

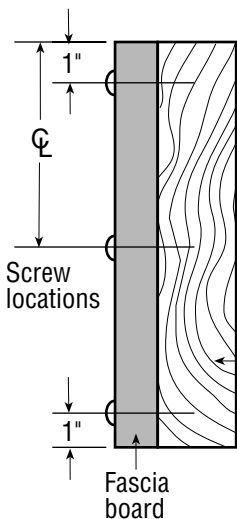

1. Two people are needed for installation due to weight of materials.
2. During installation, if possible, clamp the fascia board in place when pre-drilling and securing with screws (i.e., #8 x 2", stainless steel).

Caution:

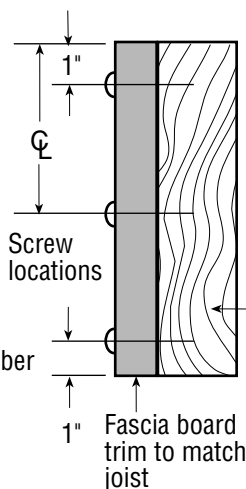

Screw spacing along the length of the board must be 16" or LESS. This helps minimize the occurrence of buckling of the board. As with most fascia products, some bowing (or buckling) of the fascia board may occur. Spacing between the fascia boards and deck boards must be at least an 1/8" minimum.
